Useful EPiServer Dojo links (updated 04/06/2015)

Tags: EPiServer Dojo   Aug 14, 2014

EPiServer's UI has always been open to modification, however EPiServer 7 onward introduced a paradigm shift in the UI as the editing interface is now a single page application built with Dojo. If you don't already know Dojo then there is a little learning to get your head around it. So I put together a list of EPiServer Dojo links that may prove useful if you want to work with Dojo in EPiServer.

Please let me know if you know in the comments below or on @davidknipe if I missed anything and/or you have a link you'd like to add.

Modifying the EPiServer User Interface
Quick Summary of Dojo Mixins in EPiServer
Adding menu item to page tree context menu
Add value with widgets
Dealing with large number of items in the content tree - part 2
Dealing with large number of items in the content tree - part 1
EPiServer: writing Dojo widget
Add a custom toolbar button in EPiServer 7
Create an EPiServer widget for edit mode EPiServer writing Dojo widget
Adding custom views to your content
Taking control of the EPiServer 7 user interface
Creating a more advanced property editor
Creating a component that searches for content
Creating a Dojo based component
Extending the User Interface of EPiServer 7 Simple dojo widget
Simple dojo widget

Custom properties/editing
Simple color picker property
Using EPiServer's content selector widget in dojo component
How to create a custom EPiServer 7 property with Dojo
Creating a Custom Property with a Dojo Widget
Custom EPiServer properties with Dojo
EPiImage & EPiImage Gallery dojo-based custom property for EPiServer 7.5 and above
Editing complex properties
Country-Region drop down lists in All properties mode
File selector dojo property for EPiServer 7
Google map selector dojo property for EPiServer 7
A custom property combined with attributes and a custom EditorDescriptor
Creating a custom editor in EPiServer 7
Hooking to a page dojo widget inside EPiServer TinyMCE link
Minimal EPiServer dojo view for property
EPiServer custom property in DOJO
Multiple page picker property in DOJO

Vishal Panday — Perfect David... everything works again as it should... thanks for doing a quick fix again! I promise i won't bother you again :-)

Using EPiServer 7.x and Chrome on a a touch screen laptop

4 comments · a year ago

davidknipe — Glad it was useful, certainly was a "gotcha" for me! I also noticed a "limit touch support" setting in user settings the other day. Not tried it but …

MenuPin for EPiServer 7.5 - Pin the top menu open in edit mode

15 comments · a year ago

Carina — Hi David Thanks for your fast answer and good support It worked in Chrome - normally I use IE

Comparing PageTypeBuilder and EPiServer 7 Preview typed pages (part 1 of 3)
